Community Psychology Maurice J. Elias 2006-02-01 Dalton, Elias, and Wandersman have answered the challenge of transforming an abstract, theoretical topic into a lively and understandable subject for students. Through concrete examples and consistent pedagogy, this text helps students understand the concepts and provides opportunities for students to apply the concepts. After introducing community psychology and its history, the authors describe methods of community research and discuss how to understand communities from the perspectives of sense of community, coping, and social support. The focus then shifts to community programs and actions: preventing problem behavior and promoting social competence, citizen participation, organizing for community and social change, and program evaluation and development.

*Human Dimensions of Ecological Restoration*  
 Dave Egan 2012-09-26 When it comes to implementing successful ecological restoration projects, the social, political, economic, and cultural dimensions are often as important as—and sometimes more important than—technical or biophysical knowledge. *Human Dimensions of Ecological Restoration* takes an interdisciplinary look at the myriad human aspects of ecological restoration. In twenty-six chapters written by experts from around the world, it provides practical and theoretical information, analysis, models, and guidelines for optimizing human involvement in restoration projects. Six categories of social activities are examined: collaboration between land manager and stakeholders ecological economics volunteerism and community-based restoration environmental education ecocultural and artistic practices policy and politics For each category, the book offers an introductory theoretical chapter followed by multiple case studies, each of which

focuses on a particular aspect of the category and provides a perspective from within a unique social/political/cultural setting. *Human Dimensions of Ecological Restoration* delves into the often-neglected aspects of ecological restoration that ultimately make the difference between projects that are successfully executed and maintained with the support of informed, engaged citizens, and those that are unable to advance past the conceptual stage due to misunderstandings or apathy. The lessons contained will be valuable to restoration veterans and greenhorns alike, scholars and students in a range of fields, and individuals who care about restoring their local lands and waters.

*A Reader in Health Policy and Management*  
 Ann Mahon 2009-06-01 "I enjoyed leafing through this collection, and seeing some of the 'modern classics' in the sociology of health excerpted - the excerpts being almost impossibly brief, although understandably so. It is good for academic-jockeys to lead practitioner-horses to the edge of heady intellectual waters- as long as they don't end up the infamous creek without a paddle. Enough mixed metaphors... I enjoyed it - really." Calum Paton, Professor of Health Policy, Keele University, UK "This book introduces the reader to many of the most important debates in health policy today through a judicious selection of contributions from a range of disciplines. It will be invaluable in helping students find their way in to a diverse and complex field of study, and should also whet their appetites to go to the sources to explore these debates in greater depth." Chris Ham, Professor of Health Policy and Management, Health Services Management Centre, University of Birmingham, UK "This book shows the great benefits of expert selection of the best writings on the subject. Our starting point for the future is what we inherit - the ideas

and structures from the past. This book shows us how we got here, and the choices for the future. In an age of Kindle and downloadable PDFs, this selection of the best in one place is invaluable to researchers, practitioners, and leaders of learning programmes. We are shaped by history, but unknowingly. Knowing our history, can free us from it. We can build on the best and avoid repeating old mistakes." Dr John Ovretveit, Director of Research and Professor of Health Innovation and Evaluation, Medical Management Centre, The Karolinska Institutet, Stockholm, Sweden "The authors have collected a good range of papers with some going back to establishment of the NHS and others drawing on healthcare in other countries to provide comparison and contrast. A few of the articles will be familiar to anyone engaged in formal learning about healthcare, but there is plenty of new material and the favourites sit well with the more unfamiliar work. All of the papers are of high standard and the reader will need to pay attention to get the most from them - there's no 'Healthcare for Dummies' here." Andrew Palmer, Student, Queens University Belfast, UK This reader offers instant access to fifty classic and original readings in health policy and management. Compiled by experts, the editors introduce a framework setting out the key policy drivers and policy levers, giving a conceptual framework that provides context for each piece. Ten key themes are covered that are relevant to managers and practitioners working in healthcare systems throughout the world and reflect much of the content of postgraduate programmes in health policy and management. These are: The role of the state in healthcare The policy making process The allocation and distribution of resources Markets and choice in healthcare Accountability and regulation Quality and safety General management and governance Evidence based health policy and management The social context of health Cultural critiques of formalised healthcare systems Each section containing a set of readings has an introduction and a

summary of key points, references and further reading so readers can explore areas of interest in more depth. A Reader in Health Policy and Management is an ideal companion text to Healthcare Management (edited by Kieran Walshe and Judith Smith) and is key reading for postgraduate students, managers, leaders and clinicians working in healthcare. It will also be of interest to those working in partnership with healthcare organisations and located in the public sector, independent and voluntary sectors.

**Meteorites** J. T. Wasson 2012-12-06 My goal in writing this book was to provide an introduction to meteorite science and a handbook on meteorite classification. Insofar as I succeeded it should prove useful both to the practicing professional and to university students at the upper-division and graduate levels. I originally intended the book to be nearly twice as long. The second half was to be a review of properties relating to the origin of each group of meteorites. Chapter XVIII is an example of how these later chapters would have looked, although most would not have been as interpretative. These chapters would have been useful chiefly to meteorite researchers looking for a quick summary of group properties; they were not written because of lack of time. Perhaps I will start to prepare this "second volume" in a year or so when my family and I have recovered from the preparation of the present volume. Although some parts of the classification portion are mildly iconoclastic, I have attempted either to avoid the inclusion of speculative interpretations or to flag them with a caveat to the reader. I have relaxed these principles somewhat in Chapter XVIII to conserve space, but even there the discussion of alternative speculations should give the reader a feeling for the degree of uncertainty attached.

*Bioarchaeological Analyses and Bodies*

Pamela K. Stone 2018-01-16 This volume features bioarchaeological research that interrogates the human skeleton in concert with material culture, ethnographic data and archival research. This approach provides examples of how these intersections of inquiry can be used to consider the larger social and political contexts in which people lived and the manner in which they died. Bioarchaeologists are in a unique position to develop rich interpretations of the lived experiences of skeletonized individuals. Using their skills in multiple contexts, bioarchaeologists are also situated to consider the ethical nature and inherent humanity of the research collections that have been used because they represent deceased for whom there are records identifying them. These collections have been the basis for generating basic information regarding the human skeletal transcript. Ironically though, these collections themselves have not been studied with the same degree of understanding and interpretation that is applied to archaeological collections.

**Accounting Principles, Third Canadian Edition** Barbara A. Trenholm 2009-05-21

*Romulus' Asylum* Emma Dench 2005-06-16 Modern treatments of Rome have projected in highly emotive terms the perceived problems, or the aspirations, of the present: 'race-mixture' has been blamed for the collapse of the Roman empire; more recently, Rome and Roman society have been depicted as 'multicultural'. Moving beyond these and beyond more traditional, juridical approaches to Roman identity, Emma Dench focuses on ancient modes of thinking about selves and relationships with other peoples, including descent-myths,

history, and ethnographies. She explores the relative importance of sometimes closely interconnected categories of blood descent, language, culture and clothes, and territoriality. Rome's creation of a distinctive imperial shape is understood in the context of the broader ancient Mediterranean world within which the Romans self-consciously situated themselves, and whose modes of thought they appropriated and transformed.

*Social Isolation and Loneliness in Older Adults* National Academies of Sciences, Engineering, and Medicine 2020-06-14  
Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality,

comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. *Social Isolation and Loneliness in Older Adults* summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. *Social Isolation and Loneliness in Older Adults* considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice, especially as the evidence base for effective interventions continues to flourish.

*The World of UCL* Negley Harte 2018-05-21  
From its foundation in 1826, UCL embraced a progressive and pioneering spirit. It was the first university in England to admit students regardless of religion and made higher education affordable and accessible to a much broader section of society. It was also effectively the first university to welcome women on equal terms with men. From the outset UCL showed a commitment to innovative ideas and new methods of teaching and research. This book charts the history of UCL from 1826 through to the present day, highlighting its many contributions to society in Britain and around the world. It covers the expansion of the university through the growth in student numbers and institutional mergers. It documents shifts in governance throughout the years and the changing social and economic context in which UCL operated, including challenging periods of reconstruction after two World Wars. Today

UCL is one of the powerhouses of research and teaching, and a truly global university. It is currently seventh in the QS World University Rankings. This completely revised and updated edition features a new chapter based on interviews with key individuals at UCL. It comes at a time of ambitious development for UCL with the establishment of an entirely new campus in East London, UCL East, and Provost Michael Arthur's 'UCL 2034' strategy which aims to secure the university's long-term future and commits UCL to delivering global impact.

**Biology, Ecology and Management of Aquatic Plants** Joseph Caffrey 2013-04-17 There is a growing need for appropriate management of aquatic plants in rivers and canals, lakes and reservoirs, and drainage channels and urban waterways. This management must be based on a sound knowledge of the ecology of freshwater plants, their distribution and the different forms of control available including chemical and physical, and biological and biomanipulation. This series of papers from over 20 different countries was generated from the tenth in the highly successful series of European Weed Research Society symposia on aquatic plant management, this being the tenth. It provides a valuable insight into the complexities involved in managing aquatic systems, discusses state-of-the-art control techniques and deals with patterns of regrowth and recovery post-management. Careful consideration is given to the use of chemicals, a practice which

has come under scrutiny in recent years. Underpinning the development of such control techniques is a growing body of knowledge relating to the biology and ecology of water plants. The authorship of the papers represents the collective wisdom of leading scientists and experts from fisheries agencies, river authorities, nature conservation agencies, the agrochemical industry and both governmental and non-governmental organisations.
