Cleaning-in-Place A. Y. Tamime 2008-05-19 This is the third edition of the Society of Dairy Technology's highly successful volume on Cleaning-in-Place (CIP). Already a well-established practice in dairy technology, CIP has become increasingly relevant in the processed food industry during the last 10-15 years, and the beverage industry has seen increased demands from customers regarding CIP verification and validation to provide improvements in plant hygiene and related efficiency. The book addresses the principles of cleaning operations, water supply issues and the science of detergents and disinfectants. Aspects of equipment design relevant to ease of cleaning are covered in a special chapter, as is the assessment of cleaning efficiency and the management of cleaning operations. This third edition features for the first time a chapter on membrane cleaning - a relatively new area requiring very specialised cleaning products and procedures. Useful data on fluid flow dynamics and laboratory test methods are also included in

separate chapters. Authors have been selected from within industry, allied suppliers and academia to provide a balanced, leading edge assessment of the subject matter. Cleaning-in-Place is directed at dairy scientists and technologists in industry and academia, general food scientists and food technologists, food microbiologists and equipment manufacturers.

Linking Civil Society and the State Gerd Schönwälder 2010-11-01 With the role of local government becoming more important as Latin American countries moved away from state-led development models in the 1980s, and with social movements helping to bring about the transition to democracy, questions arose about whether and how popular participation at the local level might be able to contribute to the consolidation of democracy from the grassroots upward. This book, based on extensive research in low-income districts of Lima, provides a sophisticated analysis of the relationship between a resurgent civil society and democratization. Exploring the complex interactions among urban popular movements, local government, political parties, and nongovernmental organizations (NGOs), Sch&önw&älder shows that the democratic potential of these movements is genuine but that their influence has been limited. His balanced assessment credits their achievements while illuminating the sources of their failures, mainly a variety of institutional barriers and a persistent threat of manipulation and co-optation

by stronger actors, especially political parties. His analysis helps us understand better why the left has so often failed to convert its considerable support at the grassroots into political successes at higher levels.

Employee Engagement in Theory and Practice Catherine Truss 2013-10-30 In recent years there has been a weight of evidence suggesting that engagement has a significantly positive impact on productivity, performance and organisational advocacy, as well as individual wellbeing, and a significantly negative impact on intent to quit and absenteeism from the work place. This comprehensive new book is unique as it brings together, for the first time, psychological and critical HRM perspectives on engagement as well as their practical application. Employee Engagement in Theory and Practice will familiarise readers with the concepts and core themes that have been explored in research and their application in a business context via a set of carefully chosen and highly relevant original and case studies, some of which are co-authored by invited practitioners. Written in an accessible manner, this book will be essential reading for scholars in the field, students studying at both undergraduate and postgraduate levels, as well as practitioners interested in finding out more about the theoretical underpinnings of engagement alongside its practical application.

Cross-cultural Business Behavior Richard R. Gesteland 2012 The theme of this new edition of Cross-Cultural Business Behavior is CHANGE. First of all, cultures change. In markets around the world, business behavior is constantly evolving, impelled by generational shifts, improvements in education, and (especially) increasing exposure to the world marketplace. That is why all of the book's 43 'Negotiator Profiles' have been thoroughly updated, with new cases and fresh examples added. In addition to the change in culture, international managers' challenges have changed too. For example, just a few years ago, participants at global management seminars around the world were mainly interested in how to communicate and negotiate with overseas partners. But, they now find that their toughest challenges are how to manage overseas subsidiaries, strategic alliances, and international partnerships. To reflect these new realities, the book's time-tested framework for understanding cross-cultural negotiating behavior has been expanded to include a wide variety of practical pointers on managing in today's global marketplace. This fifth edition is important for everyone involved with global management, whether student or manager, because cultures and business challenges do change. The book is an essential survival guide for doing business in cultures other than one's own.

SOCRATES Dr. Hoff Maarten 2016-12-02 Editorial We are living in an era of digitization thus moving towards a digital government. The use of ICT in public-administration is beneficial and it is not mere a coincidence that the top 10 countries in e-government implementation (according to UN E-Government Survey 2016) are flourishing democracies. There has been a sharp rise in the number of countries using e-government to provide public services online through one stop-platform. According to the 2016 survey, 90 countries now offer one or more

single entry portal on public information or online services, or both and 148 countries provide at-least one form of online transaction services. More and more countries are making efforts through e-government to ensure and increase inclusiveness, effectiveness, accountability and transparency in their public institutions. Across the globe, data for public information and security is being opened up. The 2016 survey shows that 128 countries now provide data-sets on government spending in machine readable formats. E-government and innovation seems to have provided significant opportunities to transform public administration into an instrument of sustainable development. The governments around the globe are rapidly transforming. The use of information and communication technology in public administration – combined with organizational change and new skills- seems to be improving public services and democratic processes and strengthening support to public policies. There has been an increased effort to utilize advanced electronic and mobile services that benefits all. Fixed and wireless broadband subscriptions have increased unevenly across regions, with Europe leading, but Africa still lagging behind. We have to focus on these substantial region disparities and growing divide. All countries agreed, in SDG 9, that a major effort is required to ensure universal access to internet in the least developed countries. The rise of Social media and its easy access seems to have enabled an increasing number of countries moving towards participatory decision making, in which developed European countries are among the top 50 performers. But, the issues of diminishing collective thinking and rising Individual thinking are some rising issues that we will have to deal with in the future. There are more sensitive issues like the new classification of citizens into literate-illiterate, e-literate and e-illiterate, that the governments need to look upon. It is a good sign that many developing countries are making good progress. Enhanced e-participation can support the realization of the SDGs by enabling more participatory decision making, but the success of e-government will ultimately depend upon our ability and capability to solve the contrasting issues raised due to this transition with sensitivity. In this issue of SOCRATES we

have discussed, this new era of Digital Government. We have focused on what we have learned from the past and the future we want. From discussions on the role of e-governance within the local government settings in a modern democratic state to the experience of an academia with online examination, we have tried to include every possible aspect of e-government. Paper authored by Dr. Hoff Maarten, aims to outline the role of e-governance within the setting of a local government in a modern democratic state. It is agreed that a local governmental organization needs to be fit for the purpose of serving its citizens. Fits can be tested both through universally acknowledged principles, and drivers that suit modern on-demand organizations. Paper authored by Mr. Alsaeed Abraheem and Dr. Carl, proposes a conceptual framework which captures the main factors (both enablers and barriers) influence and contributes toward a successful implementation of eServices in countries that have unstable status. The paper draws upon Osborn and Gaebler's work, 'reinventing government', which identifies 10 principles of government transformation. This is used to examine eGov examples in the case of Syria along with previous work covering barriers and enablers to eGov activities within countries that have unstable status. The resulting derived conceptual framework provides a base to understand eGov activity for nations going through geopolitical uncertainty. Paper authored by Mr. Saurabh Chandra highlights the initiatives taken by the Governments in India at various levels to modernise their processes and functions for delivery of information and services to the citizens, using the Information and Communication technology [ICT]. It also highlights E-Government uptake in different parts of the world, highlighting its need in India, as in developing countries like India, there is no comprehensive data on actual e-government uptake on a global scale. Paper authored by Mr. Peter Asare-Nuamah and Mr. Darko Emmanuel Agyepong highlights the various legal policies and framework that support e-governance in Ghana as well as the challenges of implementing e-governance initiatives. The findings of the study indicate that several polices and frameworks support e-governance in Ghana but

their implementations are burdened with social, cultural, political and legal constraints. The study provides some recommendations that are necessary to tackle the challenges of e-governance implementation. Paper authored by Mr. Ojo Patrick highlights battling sub-Saharan African countries. The perspective in this paper is that the emergence of democratic governments in this region occurred through lopsided process which impacts on their governance structures. Consequently, the institutionalization of liberal democracy has been omitted; the absence of which creates gaps between aspiration for and struggle by African people for democracy on the one hand, and the actual performance of democratic governments on the other hand. The paper identifies structural deficiencies in the current pattern of governance as the political missing link in the value chain between democracy and development in the region. The paper recommends e-governance; an administrative process that guarantees good governance through accountability and transparency, as the necessary connecting link and panacea to bridging the observable existing gaps. Paper authored by Dr. Nandita Kaushal highlights the Plausibility of E-Governance as a Public Service Delivery Mechanism in India. It argues that there is no doubt, wherever e-governance projects have been conceived, designed and implemented with due regard to the needs of the people there positive outcomes have been visible. However, it has to be acknowledged that most of the projects are facing multiple challenges which are reducing their success rate. It recommends serious consideration to all the issues which are hampering their efficiency. At the same time it suggests measures that must be taken up to maintain the human face of these initiatives. Paper authored by Dr. Inderjeet Singh Sodhi reviews the achievements and progress of e-government in India. The paper briefly discusses various e-government projects in India. The purpose of the paper is to delve into policy and issue of the government of India in making e-government accessible to the common person. It briefly identifies the strategic issues for achievement of e-government. This paper derives a list of key strategic factors that are appropriate for planning, designing, development and implementation of e-government. The paper identifies the range of diverse problems, challenges and barriers planners and developers must face as they work in the e-government projects. The paper discusses prospects and future of e-government in India. The paper highlights the role of government to develop richer and deeper understanding of e-government. Paper authored by Ms. Shreyasi Ghosh attempts to trace the essence of e-government in the modern era of Indian Public Administration today as another new paradigm shift is in the offspring and slowly becoming distinct from the amorphous shape of Public Administration in the Indian context with the ICT-blessed governance, or e-Governance. Paper authored by Ms. Stuti Saxena probes the OGD platform using a qualitative and quantitative lens. This paper shows that OGD usage is popular among the end-users in terms of the number of views and downloads of the datasets. Future research might undertake the empirical investigation of the research hypotheses advanced in the paper. Paper authored by Dr. Jyotirmoy W. Singh is developed by a contributor who has been a national and International online examiner for past six or more years. This paper is based on his experience. It seeks to compare the traditional mode of examination with that of the online examination in citing the mode of High School Leaving Examination of Board of Secondary Education Manipur and International Baccalaureate Organisation (IBO) examination as case studies. I wish scholars and potential readers will find this issue useful. We will bring more special issues focused on e-government and other various dimensions of governance in the near future. Iran, Revolution, and Proxy Wars Ofira Seliktar 2019-12-17 This book analyzes the historical quest of the Islamic Republic of Iran to export its revolution to the Muslim countries in the Middle East and beyond. The authors argue that Iran exported its revolution by using proxies such as Hezbollah, the Iraqi Shite militias, and the Houthis. The study unravels the casual chain behind less-known cases of Iranian sponsorship of al Qaeda (Central) and al Qaida in Iraq. It

combines rigorous theory with detailed empirical analysis which can add to the current debate about ways to roll back Iran's revolutionary export.

How Should Democracies Fight Terrorism? Patti Tamara Lenard 2020-06-30 In the wake of major terrorist attacks, calls for ever more draconian policies to prevent further outrages are common. Such responses raise the pressing question: is it possible to effectively fight terrorism while respecting democratic values of equality and trust? Examining recent examples of terrorist atrocities – from the murder of Muslims in New Zealand and Jews in Pittsburgh to the Charlie Hebdo attacks – Patti Tamara Lenard considers how democracies should tackle terrorism within the constraints imposed by democratic principles. For many, the tension between liberty and security necessarily means that the only way to protect security is to sacrifice liberty—but Lenard rejects this claim, and instead argues that security's goal should be to keep all citizens equally secure in the face of terrorist threats. Critiquing existing policies, from exile to racial profiling, she outlines what ethical counter-terrorism policies should look like, arguing for strategies that respect equality and thereby maintain trust among diverse communities in democratic states. This erudite guide to how states might ethically fight terrorism will be essential reading for any student or scholar of public affairs, security, counter-terrorism, and democratic governance.

The 1.5 Billion People Question Harold Alderman 2017-10-12 Most of the people in low and middle-income countries covered by social protection receive assistance in the form of in-kind food. The origin of such support is rooted in countries' historical pursuit of three interconnected objectives, namely attaining self-sufficiency in food, managing domestic food prices, and providing income support to the poor. This volume sheds light on the complex, bumpy and non-linear process of how some flagship food-based social protection programs have evolved over time, and how they currently work. In particular, it lays out the broad trends in reforms, including a growing move from in-kind modalities to cash transfers, from universality to targeting, and from agriculture to social protection. Case studies from Egypt,

India, Indonesia, Mexico, Sri Lanka, and United States document the specific experiences of managing the process of reform and implementation, including enhancing our understanding of the opportunities and challenges with different social protection transfer modalities.

Seeking Order in Anarchy Robert W. Murray 2016-07-20 "Seeking Order in Anarchy offers insights into both the theoretical foundations and the real-world outcomes of multilateralism in world affairs. Recognizing that Tom Keating's theories, though rooted in Canadian foreign policy, have a broader application in international relations, Robert W. Murray has assembled an array of interpretations of multilateralism and case studies examining its practical effects. Drawing from the insights of fourteen noted scholars and featuring an essay from Tom Keating himself, the volume examines the conditions that encourage states to adopt multilateral strategies, and the consequences of doing so in the context of increasingly complex global politics. Seeking Order in Anarchy is an important book for scholars, graduate students, policy makers, and anyone interested in how multilateralism functions in today's world."--

Design Thinking Research Larry Leifer 2013-08-19 This book summarizes the results of Design Thinking Research carried out at Stanford University in Palo Alto, California, USA, and Hasso Plattner Institute in Potsdam, Germany. The authors offer readers a closer look at Design Thinking with its processes of innovations and methods. The contents of the articles range from how to design ideas, methods, and technologies via creativity experiments and wicked problem solutions, to creative collaboration in the real world and the connectivity of designers and engineers. But the topics go beyond this in their detailed exploration of design thinking and its use in IT systems engineering fields and even from a management perspective. The authors show how these methods and strategies work in companies, introduce new technologies and their functions and demonstrate how Design Thinking

can influence as diverse a topic area as marriage. Furthermore, we see how special design thinking use functions in solving wicked problems in complex fields. Thinking and creating innovations are basically and inherently human – so is Design Thinking. Due to this, Design Thinking is not only a factual matter or a result of special courses nor of being gifted or trained: it's a way of dealing with our environment and improving techniques, technologies and life.

Commercial Management David Lowe 2013-05-31 Commercial Management: theory and practice defines the role of commercial management within project-oriented organisations, providing a framework for and helping to develop a critical understanding of the factors that influence commercial management practice. It also identifies generic aspects of this practice and provides a theoretical foundation to these activities, by reference to existing and emergent theories and concepts, as well as to relevant management best practice. The book is structured into four parts: Part 1 Introduction – Commercial Management in Project Environments explores the nature of commercial practice within project-oriented organisations at the buyer-seller interface. It presents a Commercial Management framework, which illustrates the multiple interactions and connections between the purchaser's procurement cycle and a supplier's bidding and implementation cycles. Additionally, it outlines the principle activities undertaken by the commercial function, identifies the skills and abilities that support these activities and reviews the theories and concepts that underpin commercial practice. Finally, it identifies areas of commonality of practice with other functions found within project-oriented organisations, plus sources of potential conflict and misunderstanding. Part 2 – Elements of Commercial Theory and Practice covers commercial leadership; exploring strategy; risk and uncertainty management; financial decision-

making; and key legal issues. Part 3 – Approaches to Commercial Practice addresses best practice management; and commercial and contracting strategies and tactics. Finally, Part 4 – Case Studies offers two extended case studies: Football Stadia (the Millennium Stadium, Cardiff; the Emirates Stadium, Islington; and Wembley Stadium, London); and Heathrow Terminal 5. The book provides a one-stop-shop to the many topics that underpin commercial management practice from both a demand (buy-side) and a supply (sell-side) perspective. It will help develop an understanding of the issues influencing commercial management: leadership, strategy, risk, financial, legal, best practice management and commercial and contracting strategy and tactics. This book's companion website is at www.wiley.com/go/lowecommercialmanagement and offers invaluable resources for both students and lecturers: • PowerPoint slides for lecturers on each chapter • Sample exam questions for students to practice • Weblinks to key journals and relevant professional bodies

Contract Management Peter Sammons 2017-07-03 Contract management is a key management skill, yet it is underplayed in most organizations, which usually default to project management skills as a proxy for contract management skills. Whilst project management skills are equally essential, they are not the same thing. Contract Management looks at the wider contract management picture from an industrial-commercial perspective, and helps set-out typical structures and processes that assist the contract management task. The author uses diagramatic representations to depict complex ideas. Contract Management includes "learning points" in each chapter, looking at handling problems, procedural changes and enhancing commercial performance.

Metaskills Marty Neumeier 2012-12-20 In a sweeping vision for the future of work, Neumeier shows that the massive problems of the 21st century are largely the consequence of a paradigm shift—a shuddering gear-change from the familiar Industrial Age to the unfamiliar "Robotic Age," an era of increasing man-machine collaboration. This change is creating the "Robot Curve," an accelerating waterfall of obsolescence and opportunity that is currently reshuffling the fortunes of workers, companies, and national economies. It demonstrates how the cost and value of a unit of work go down as it moves from creative to skilled to rote, and, finally, to robotic. While the Robot Curve is dangerous to those with brittle or limited skills, it offers unlimited potential to those with metaskills—master skills that enable other skills. Neumeier believes that the metaskills we need in a post-industrial economy are feeling (intuition and empathy), seeing (systems thinking), dreaming (applied imagination), making (design), and learning (autodidactics). These are not the skills we were taught in school. Yet they're the skills we'll need to harness the curve. In explaining each of the metaskills, he offers encouragement and concrete advice for mastering their intricacies. At the end of the book he lays out seven changes that education can make to foster these important talents. This is a rich, exciting book for forward-thinking educators, entrepreneurs, designers, artists, scientists, and future leaders in every field. It comes illustrated with clear diagrams and a 16-page color photo essay. Those who enjoy this book may be interested in its slimmer companion, The 46 Rules of Genius, also by Marty Neumeier. Things you'll learn in Metaskills: - How to stay ahead of the "robot curve" - How to account for "latency" in your predictions - The 9 most common traps of systems behavior - How to distinguish among 4 types of originality - The 3 key steps in generating innovative solutions - 6 ways to think like Steve Jobs - How to recognize the 3

essential qualities of beauty - 24 aesthetic tools you can apply to any kind of work - 10 strategies to trigger breakthrough ideas - Why every team needs an X-shaped person - How to overcome the 5 forces arrayed against simplicity - 6 tests for measuring the freshness of a concept - How to deploy the 5 principles of "uncluding" - The 10 tests for measuring great work - How to sell an innovative concept to an organization - 12 principles for constructing a theory of learning - How to choose a personal mission for the real world - The 4 levels of professional achievement - 7 steps for revolutionizing education From the back cover "Help! A robot ate my job!" If you haven't heard this complaint yet, you will. Today's widespread unemployment is not a jobs crisis. It's a talent crisis. Technology is taking every job that doesn't need a high degree of creativity, humanity, or leadership. The solution? Stay on top of the Robot Curve--a constant waterfall of obsolescence and opportunity fed by competition and innovation. Neumeier presents five metaskills--feeling, seeing, dreaming, making, and learning--that will accelerate your success in the Robotic Age.

"Tayloristic work practices are a thing of the past" Anna Jung 2014-02-10 Essay from the year 2013 in the subject Business economics - Economic and Social History, grade: 84, University of Hertfordshire, course: Organisational Behaviour. Theory and Practice, language: English, abstract: In today's competitive environment improving efficiency and elevating organisational performance is critically important to remain competitive in the global marketplace. In the late nineteenth century Frederick W. Taylor developed one of the earliest conceptions of management in order to maximise firm productivity. He argued that performance can only be improved by the application of scientific practices and established his 'principles of scientific management' (Taylor, 1998). However, due to the Human Relations movement in the 1930s which emphasised the impact of the social context of the workplace on firm productivity, Taylor's theory of 'scientific management' became obsolete (Legge, 2005; Thompson & McHugh, 2009). Conversely, many researchers believe that Taylorism is revived and argue that Tayloristic ideologies are still dominant in workplaces today (Bain et al., 2002; Bell & Martin, 2012; Braverman, 1998). More importantly, the continuing relevance of Tayloristic methods in organising work is no longer restricted to the traditional manufacturing industry, but can also be found to a greater degree in the rapidly growing service industry (Braverman, 1998; Crowley et al., 2010). In this context, most notably the nature of work processes in telephone call centres (Taylor et al., 2002; Zapf et al., 2003) and the fast food industry (Ritzer, 1996 & 1998) has aroused a great deal of attention. For instance, a BBC News article raises the question "Are call centres the factories of the 21st Century?" (Hudson, 2011) and thus underpins the controversial debate about the working conditions in call centres. Accordingly, it is worthwhile to scrutinise this argument in more detail. With that said, the objective of this essay is to critically appraise the statement 'Tayloristic work practices are a thing of the past" in the context of the growth of the services organisations. First, in order to set the scene for the examination of this proposition, the concept of 'Taylorism' will be outlined. After that, by means of primarily call centre organisations, and fast food restaurants, occurrence of Tayloristic work practices in the service sector will be investigated. Finally, based on these expositions, the main findings will be summarised and evaluated. [...]

Finding Unconscious Fantasy in Narrative, Trauma, and Body Pain Paula L. Ellman 2017-05-25 Finding Unconscious Fantasy in Narrative, Trauma, and Body Pain: A Clinical Guide demonstrates that the concept of the unconscious is profoundly relevant for understanding the mind, psychic pain, and traumatic human suffering. Editors Paula L. Ellman and Nancy R. Goodman established this book to discover how symbolization takes place through the "finding of unconscious fantasy" in ways that mend the historic split between trauma and fantasy. Cases present the dramatic encounters between patient and therapist when confronting discovery of the unconscious in the presence of trauma and body pain, along with narrative. Unconscious fantasy has a central role in both clinical and theoretical psychoanalysis. This volume is a guide to the workings of the dyad and the therapeutic action of "finding" unconscious meanings. Staying close to the clinical engagement of analyst and patient shows the transformative nature of the "finding" process as the dyad works with all aspects of the unconscious mind. Finding Unconscious Fantasy in Narrative, Trauma, and Body Pain: A Clinical Guide uses the immediacy of clinical material to show how trauma becomes known in the "here and now" of enactment processes and accompanies the more symbolized narratives of transference and countertransference. This book features contributions from a rich variety of theoretical traditions illustrating working models including Klein, Arlow, and Bion and from leaders in the fields of narrative, trauma, and psychosomatics. Whether working with narrative, trauma or body pain, unconscious fantasy may seem out of reach. Attending to the analyst/ patient process of finding the derivatives of unconscious fantasy offers a potent roadmap for the way psychoanalytic engagement uncovers deep layers of the mind. In focusing on the places of trauma and psychosomatic concreteness, along with narrative, Finding Unconscious Fantasy in Narrative, Trauma, and Body Pain: A Clinical Guide shows the vitality of "finding" unconscious fantasy and its effect in initiating a symbolizing process. Chapters in this book bring to life the sufferings and capacities of individual patients with actual verbatim process material demonstrating how therapists and patients discover and uncover the derivatives of unconscious fantasy. Finding the unconscious meanings in states of trauma, body expressions, and transference/countertransference enactments becomes part of the therapeutic dialogue between therapists and patients unraveling symptoms and allowing transformations. Learning how therapeutic work progresses to uncover unconscious fantasy will benefit all therapists and students of psychoanalysis and psychoanalytic psychotherapy interested to know more about the psychoanalytic dialogue.

Expanded from a special issue of the journal Community Development, Theory, Practice, and Community Development collects previously published and widely cited essays, as well as new theoretical and empirical research in community development. Compiled by the editors of Community Development, the essays feature topics as varied as placemaking, democratic theory and rural organizing. After Violence Elin Skaar 2015-04-17 After Violence: Transitional Justice, Peace, and Democracy examines the effects of transitional justice on the development of peace and democracy. Anticipated contributions of transitional justice mechanisms are commonly stated in universal terms, with little regard for historically specific contexts. Yet a truth commission, for example, will not have the same function in a society torn by long-term civil war or genocide as in a society emerging from authoritarian repression. Addressing trials, reparations, truth commissions, and amnesties, the book systematically addresses the experiences of four very different contemporary transitional justice cases: post-authoritarian Uruguay and Peru and post-conflict Rwanda and Angola. Its analysis demonstrates that context is a crucial determinant of the impact of transitional justice processes, and identifies specific contextual obstacles and limitations to these processes. The book will be of much interest to scholars in the fields of transitional justice and peacebuilding, as well as students generally concerned with human rights and democratisation.
