Strengthening Forensic Science in the United States

National Research Council 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Life Imprisonment and Human Rights Dirk van Zyl Smit 2016-12-01 In many jurisdictions today, life imprisonment is the most severe penalty that can be imposed. Despite this, it is a relatively under-researched form of punishment and no meaningful attempt has been made to understand its full human rights implications. This important collection fills that gap by addressing these two key questions: what is life imprisonment and what human rights are relevant to it? These questions are explored from the perspective of a range of jurisdictions, in essays that draw on both empirical and doctrinal research. Under the editorship of two leading scholars in the field, this innovative and important work will be a landmark publication in the field of penal studies and human rights.

Strike and Destroy Stjepan Gabriel Meštrović 2012 In a spontaneous-combustion theory of war crimes, Jeremy Morlock and 11 other soldiers were charged with having murdered 3 Afghans, as if they just spontaneously did monstrous things. But in an extraordinary court-martial the Defense showed that in fact the atrocities originated in a failure of leadership and a dysfunctional brigade climate. Dr. Stjepan Mestrovic, a professional sociologist who has testified in the trial, explains.

As Resident Aliens Kathleen Kern 2010-01-01 "As the crucifixes drenched with Jewish blood drop from our hands, we stand impotent and wordless before this tragedy of Israel and Palestine . . . In the name of the crucified Messiah, we must struggle against the conditions which make history a trail of crucifixions. Only then, in solidarity with Jews and Palestinians, can we dream of Messianic times, of a shalom without victims." With these words, theologian Rosemary Radford Reuther laid out the pitfalls for Christians entering the arena of the Palestinian-Israeli conflict. Nevertheless, in 1995, a small cohort of pacifist Christians decided to paddle against the currents of history, against the crusades, pogroms, and colonial enterprises of their co-religionists, toward that goal of "a shalom without victims." Setting up a project in the West Bank city of Hebron, over the next ten years Christian Peacemaker Teams forged relationships with Palestinians, Israelis, and internationals who were resisting the Israeli military occupation of Palestine. As "resident aliens" (See Exodus 23:9) they have sojourned in the Holy Land to support Palestinians and Israelis who reject violence as a means of solving the conflict, who think that one nation has no right to subjugate and exploit another, and who believe all the residents of the region are entitled to the same, exactly the same, human rights. This book charts the growth of CPT in Palestine, how it adapted to changing political conditions, spread to locations outside of Hebron, and developed networks with activists throughout Palestine and Israel.

Racial Criminalization of Migrants in the 21st Century

Salvatore Palidda 2016-05-23 Over the last two decades in the West, there has been a significant increase in the arrest, imprisonment and detention of migrants. The racial criminalization and victimization of migrants and Roma people has led judicial authorities, local governments, the police, mass media and the general population to perceive migrants and 'gypsies' as responsible for a wide range of offences. Taking into consideration the political and cultural conditions that affect and interconnect societies of emigration and immigration, the contributors examine and compare a range of cases in Europe and the United States. The contributions demonstrate how the persecution of the 'current enemy' is the 'total political fact' of the 21st century in that it ensures consensus and business, or what might be termed the 'crime deal' of today. This provocative book has international appeal and will be a valuable resource for academics, researchers and policymakers with an interest in migration and social and ethnic control.

Politics and Pan-Africanism Dawn Nagar 2019-12-12 Offering an examination of the diplomatic and economic regional power structures in Africa and their relationships with each other, Dawn Nagar discusses the potential and future of pan-Africanism. Providing a detailed overview of the current relationship between these power blocs, this book provides insight into the current state of diplomatic and economic relations within Africa and shows how

far there is to go for a future of Pan-Africanism.

The Police and International Human Rights Law Ralf Alleweldt

2018-02-20 This book provides an updated overview of current international human rights law relating to the police. Around the globe, the police have a special responsibility for the protection of human rights. Police work is governed by national rules and in addition, in today's world, by the evolving international human rights standards. As a result of the ever-developing case law of international courts and other bodies, the requirements of human rights law on policing have become more and more detailed and complex in recent years. Bringing together a variety of distinguished authors from academia, police forces and other government authorities, the human rights movement, and international organizations, the book discusses topical issues, including the use of deadly force, the prevention of torture, effective investigations, the protection of personal data, and positive obligations of the police.

Wind Energy Systems John Dalsgaard Sørensen 2010-12-20 Large-scale wind power generation is one of the fastest developing sources of renewable energy and already makes a substantial contribution to power grids in many countries worldwide. With technology maturing, the challenge is now to increase penetration, and optimise the design, construction and performance of wind energy systems. Fundamental issues of safety and reliability are paramount in this drive to increase capacity and efficiency. Wind energy systems: Optimising design and construction for safe and reliable operation provides a comprehensive review of the latest developments in the design, construction and operation of large-scale wind energy systems, including in offshore and other problematic environments. Part one provides detailed coverage of wind resource assessment and siting methods relevant to wind turbine and wind farm planning, as well as aeroelastics, aerodynamics, and fatigue loading that affect the safety and reliability of wind energy systems. This coverage is extended in part two, where the design and development of individual components is considered in depth, from wind turbine rotors to drive train and control systems, and on to tower design and construction. Part three explores operation and maintenance issues, such as reliability and maintainability strategies and condition monitoring systems, before discussing performance assessment and optimisation routes for wind energy systems in low wind speed environments and cold climates. Part four reviews offshore wind energy systems development, from the impact of environmental loads such as wind, waves and ice, to site specific construction and integrated wind farm planning, and of course the critical issues and strategies for offshore operation and maintenance. With its distinguished editors and international teams of contributors, Wind energy systems is a standard reference for wind power engineers, technicians and manufacturers, as well as researchers and academics involved in this expanding field. Reviews the latest developments in the design, construction and operation of large-scale wind energy systems Offers detailed coverage of wind resource assessment and siting methods relevant to wind turbine and wind farm planning Explores operation and maintenance issues, such as reliability and maintainability strategies and condition monitoring systems
