Equilibrium Between Phases of Matter H.A.J. Oonk 2007-10-23 The first volume of this work is organized in three levels, so that the portion and importance of thermodynamics and mathematics increase from level to level. The ground level shows that basics of phase equilibria can be understood without thermodynamics provided the concept of chemical potential is introduced early. The intermediate level introduces thermodynamics, culminating in the Gibbs energy as the arbiter for equilibrium. At the third level the accent is on binary systems, where one or more phases are solutions of the components. Priority is given throughout to the thermodynamic assessment of experimental data. 200 exercises are included with solutions.

Differentiating Instruction With Menus Laurie E. Westphal 2021-09-03

Differentiating Instruction With Menus: Chemistry offers teachers everything needed to create a student-centered learning environment based on choice. This book uses different types of menus that students can use to select exciting advanced-level products that they will develop so teachers can assess what has been learned—instead of using a traditional worksheet format. Topics addressed include chemistry basics, measurements, atoms, chemical bonding and reactions, gas laws, energy, acids and bases, and nuclear and organic chemistry. Differentiating Instruction With Menus: Chemistry contains attractive reproducible menus, each based on the levels of Bloom's revised taxonomy as well as incorporating different learning styles. These menus can be used to guide students in making decisions as to which products they will develop after studying a major concept or unit. Grades 9-12
