Language and Cognition Lawrence J. Raphael 2013-11-21 We are pleased to be able to honor Arthur J. Bronstein with this volume of essays. We are all the more pleased because the volume has considerable intrinsic merit, but neither the reader nor Arthur should have any doubts about our primary purpose in assembling this book. That the collection is intrinsically valuable is, in itself, a tribute to the man whom it honors: The contributing authors are all colleagues, students, and friends of Arthur. Readers who are acquainted with Arthur will not be surprised by the broad range of academic expertise which has been brought to bear on the subject of language in this book. They will recognize that Arthur's own range of expertise and interest is only barely matched by the contents of the essays and the backgrounds of their authors. On the other hand, those who know little about Arthur may have thought of him primarily in narrow association with phonetics and linguistics, most likely as the author of *The Pronunciation of American English*, surely the most influential of American phonetics texts during the last quarter of a century. Although such an association is in many respects appropriate, it is altogether too limited, but this will not deter us from using it as the basis for a relevant and, we hope, revealing metaphor about Arthur J.

The Situation is Hopeless, But Not Serious Paul Watzlawick 1993 Calling upon metaphors, vignettes, jokes, innuendos, and certain other "right-hemispheric" language games, Paul Watzlawick shows how we can (and do) make everyday life miserable.

The iPod Tutor Intelligent Community The Intelligent Community 2007-09-01 This work carefully dissects Richard Dawkins' argument about the existence of God and exposes its numerous logical fallacies and factual errors, ultimately demonstrating that Dawkins' primary argument is itself a faith-based construction. A copy of "The God Delusion," an iPod or other MP3 player, and a broadband connection to download MP3 files are required to use this learning program. (World Religions)

Crash Communication Peter Brandl 2016-02-23 Have you ever wondered why, in spite of the highest safety precautions, catastrophic air accidents still occur from time to time? You may just as well ask, how is it possible that a lender would give \$320 million to an insolvent US bank, with no idea how to get the money back? In *Crash Communication*, Peter Brandl combines his professions—pilot, manager, and entrepreneur—to draw striking parallels between aviation and the corporate world. In his book, he shows that the "human error" factor follows a fatal logic. Brandl offers original and relevant answers to fundamental questions of leadership and communication. His fascinating approach shows managers and executives in the "corporate cockpit" what to do when the warning lights come on.

Multicriteria Methodology for Decision Aiding B. Roy 2013-11-11 axiomatic results should be at the heart of such a science. Through them, we should be able to enlighten and scientifically assist decision-making processes especially by: - making that which is objective stand out more clearly from that which is less objective; - separating robust from fragile conclusions; - dissipating certain forms of misunderstanding in communication; - avoiding the pitfall of illusory reasoning; - emphasizing, once they are understood, incontrovertible results. The difficulties I encountered at the beginning of my career as an operations researcher, and later as a consultant, made me realize that there were some limitations on objectivity in decision-aiding. In my opinion, five major aspects must be taken into consideration: 1) The borderline (or frontier) between what is and what is not feasible is often fuzzy. Moreover, this borderline is frequently

modified in light of what is found from the study itself. 2) In many real-world problems, the "decision maker D" does not really exist as a person truly able to make a decision. Usually, several people (actors or stakeholders) take part in the decision process, and it is important not to confuse the one who ratifies a decision with the so-called decision maker in the decision aiding process. This decision maker is in fact the person or the set of persons for whom or in the name of whom decision aiding effort is provided.

Plato's Revenge William Ophuls 2011-08-19 A provocative essay that imagines a truly ecological future based on political transformation rather than the superficialities of "sustainability." In this provocative call for a new ecological politics, William Ophuls starts from a radical premise: "sustainability" is impossible. We are on an industrial Titanic, fueled by rapidly depleting stocks of fossil hydrocarbons. Making the deck chairs from recyclable materials and feeding the boilers with biofuels is futile. In the end, the ship is doomed by the laws of thermodynamics and by the implacable biological and geological limits that are already beginning to pinch. Ophuls warns us that we are headed for a postindustrial future that, however technologically sophisticated, will resemble the preindustrial past in many important respects. With *Plato's Revenge*, Ophuls, author of *Ecology and the Politics of Scarcity*, envisions political and social transformations that will lead to a new natural-law politics based on the realities of ecology, physics, and psychology. In a discussion that ranges widely—from ecology to quantum physics to Jungian psychology to Eastern religion to Western political philosophy—Ophuls argues for an essentially Platonic politics of consciousness dedicated to inner cultivation rather than outward expansion and the pursuit of perpetual growth. We would then achieve a way of life that is materially and institutionally simple but culturally and spiritually rich, one in which humanity flourishes in harmony with nature.

American Propaganda from the Spanish-American War to Iraq Steven Robert Brydon 2021-11-15 This book analyzes American war propaganda, beginning with the Spanish-American War and extending through the wars in Afghanistan and Iraq. Using Fisher's narrative paradigm, the author identifies and critically evaluates recurring war stories, determining whether or not they truly provided good reasons to go to war.

Pragmatist Realism Sami Ludwig 2002 Literary realists have often been dismissed by later writers of the modernist and post-structuralist schools for their lack of aesthetic sophistication and etymological naïveté. In *Pragmatist Realism*, Sami Ludwig argues that the artistic quality of realist texts is better appreciated by approaching them from a cognitive perspective, rather than from a linguistic or formalist one. Ludwig notes that literary realism arose from the same cultural scene as the pragmatist philosophy of William James and Charles Sanders Peirce, and that cognitive psychology built upon pragmatist philosophy. He argues that the aim of realist writers, like that of cognitive scientists, is to track the arc of learning from experiences. Ludwig contends that this cognitive perspective is a useful corrective to other approaches to literary criticism that focus on textual hermeneutics. He argues further that the cognitive paradigm can enhance our understanding of literary representation, not only in realist works by Mark Twain, William Dean Howells, Henry James, Charles Chesnut, and others, but in literature generally.

How Real is Real? Paul Watzlawick 1977 Examines the ways in which communication and disruptions of communication create and can create simultaneously present versions of reality, providing illustrative anecdotal accounts of

related scientific, literary, and other subjects
The Language of Change Paul Watzlawick 1993 In this groundbreaking book, a world authority on human communication and communication therapy points out a basic contradiction in the way therapists use language. Although communications emerging in therapy are ascribed to the mind's unconscious, dark side, they are habitually translated in clinical dialogue into the supposedly therapeutic language of reason and consciousness. But, Dr. Watzlawick argues, it is precisely this bizarre language of the unconscious which holds the key to those realms where alone therapeutic change can take place.

Quantitative Value Wesley R. Gray 2012-11-29 A must-read book on the quantitative value investment strategy Warren Buffett and Ed Thorp represent two spectrums of investing: one value driven, one quantitative. Where they align is in their belief that the market is beatable. This book seeks to take the best aspects of value investing and quantitative investing as disciplines and apply them to a completely unique approach to stock selection. Such an approach has several advantages over pure value or pure quantitative investing. This new investing strategy framed by the book is known as quantitative value, a superior, market-beating method to investing in stocks. Quantitative Value provides practical insights into an investment strategy that links the fundamental value investing philosophy of Warren Buffett with the quantitative value approach of Ed Thorp. It skillfully combines the best of Buffett and Ed Thorp—weaving their investment philosophies into a winning, market-beating investment strategy. First book to outline quantitative value strategies as they are practiced by actual market practitioners of the discipline Melds the probabilities and statistics used by quants such as Ed Thorp with the fundamental approaches to value investing as practiced by Warren Buffett and other leading value investors A companion Website contains supplementary material that allows you to learn in a hands-on fashion long after closing the book If you're looking to make the most of your time in today's markets, look no further than Quantitative Value.

Pragmatics of Human Communication: A Study of Interactional Patterns, Pathologies and Paradoxes Paul Watzlawick 2011-04-25 For the first time, a new generation of readers will have the opportunity to experience the ideas set forth in Pragmatics of Human Communication, a book that formed the foundation of much research into interpersonal communication in the latter portion of the 20th century. A new preface by Bill O'Hanlon puts Watzlawick's work in context for readers in this new paperback edition. Topics covered in this wide-ranging book include: the origins of communication; the idea that all behavior is communication; meta-communication; the properties of an open system; the family as a system of communication; the nature of paradox in psychotherapy; existentialism and human communication. After defining certain general concepts, the authors present basic characteristics of human communication and illustrate their manifestations and potential pathologies. Then the systemic aspects of human interactions that arise from the patterning of specific characteristics of communication are exemplified by the analysis of Albee's Who's Afraid of Virginia Woolf?

Constructivism in Education Leslie P. Steffe 2012-10-12 Unique in offering a multidisciplinary perspective on key issues of alternative epistemologies in education, this collection includes contributions from scholars in family therapy, epistemology, and mathematics, science, and language education. These respected researchers were brought together to develop the theme of constructivism as it applies to many diversified fields. This book examines key distinctions of various constructivist epistemologies, comparing and contrasting the various paradigms. Each section provides both keynote positions on a particular alternative paradigm as well as critical comments by respondents regarding that position. Several chapters also present a synthesis of the alternative epistemological perspectives.

Behind the Frontiers of the Real David Roas 2018-02-15 This book offers a definition of the fantastic that establishes it as a discourse in constant intertextual relation with the construct of reality. In establishing the definition of the fantastic, leading scholar David Roas selects four central concepts that allow him to chart a fairly clear map of this terrain: reality, the impossible, fear, and language. These four concepts underscore the fundamental issues and problems that articulate any theoretical reflection on the fantastic: its necessary relationship to an idea of the real, its limits, its emotional and psychological effects on the receiver and the transgression of language that is undertaken when attempting to express what is, by definition, inexpressible as it is beyond the realms of the conceivable. By examining such concepts, the book explores multiple perspectives that are clearly interrelated: from literary and comparative theory to linguistics, via philosophy, science and cyberculture.
RADICAL CONSTRUCTIVISM Ernst von Glasersfeld 2013-08-06 First Published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

This discussion is supported by an extract from the thinker's own writing, to give a flavour of their work and to give readers a sense of which thinkers are most relevant to their own interests.

Mind Control Through the Mass Media: Transmission of the Politics of Inequality B. Barrett-Lennard 2020-12-09

This work is a scathing attack on the media. Many such attacks have been written before, particularly over the past century, & there will be many more to come. Such attacks are quite in order because this is precisely what the mass media deserve. At the same time, a lot of people would be sharper critics of specific media outlets, media proprietors & other individuals working in the propaganda cartels than the author has been.

Bi-directionality in the Cognitive Sciences Marcus Callies 2011 Cognitive science is the interdisciplinary study of the human mind. As far as the exact relationship between the cognitive sciences and other fields is concerned, however, it appears that interdisciplinary exchange often remains unrealized, possibly because of the uni-directional application of theories, concepts, and methods, which impedes the productive transfer of knowledge in both directions. In the course of the cognitive turn in the humanities and social sciences, many disciplines have selectively borrowed ideas from core cognitive sciences like psychology and artificial intelligence. The day-to-day practice of interdisciplinarity thus thrives on one-directional borrowings. Focusing on cognitive approaches in linguistics and literary studies, this volume explores "bi-directionality," a genuine transdisciplinary interchange in which both disciplines are borrowing and lending. The contributions take different perspectives on bi-directionality: some extend uni-directional borrowing practices and point to avenues and crossroads, while others critically discuss obstacles, challenges, and limitations to bi-directional transfer."

A New Human Impulse for Social Relations and Cultural Development Silvia Viñao Manzanera 2017-03-07 The second volume of the New Horizon Series, this book offers an overview of a wide range of contemporary issues in education and society, including narrative explorations, various models of education and learning, study techniques, leadership, experiential learning, emotions, personal development, recreational activities, emerging technologies, and the media, among others. All the topics discussed here currently subject to research and debate, but have been prevalent throughout history, impacting on different fields, including education, communication, and health. As such, it is vital to understand these topics in order to live in a society in which one must interact with other people and regulate one's emotions. All the contributors to this volume investigate how these issues affect society in general, reflecting on the causes of the functioning of the world. All chapters here provide a full and clear frame of reference for the problems, issues and disciplines discussed here, offering professional and experienced insights from a range of disciplines including education, history, psychology, literature and pedagogy. As such, this book represents a highly useful and contemporary manual for both students and the general public with an interest in the social sciences.

The Anatomy of Humbug Paul Feldwick 2015-02-28 How does advertising work? Does it have to attract conscious attention in order to transmit a 'Unique Selling Proposition'? Or does it insinuate emotional associations into the subconscious mind? Or is it just about being famous... or maybe something else again?

The Politics of Prayer Helen Hull Hitchcock 1992 Distinguished Catholic and Jewish scholars, theologians, and linguists offer important insights into the functions of language as well as penetrating analyses of the feminists' influence on Scripture and worship.

The Trace Odyssey 1 Beatrice Galinon-Melenec 2021-04-06 Whether it is to look to the past in search of their origins, analyze their present activity, particularly digital, or to think about the effects of their actions on the future, 21st century humans regularly question their traces. Collective questions and technical progress offer new resources which, in turn, raise the problems of traces. In order to reveal the difficulties posed by the unanalyzed trace, this book proposes a journey through different contexts. Along the way, intellectuals (including Bateson, Barthes, Bourdieu, Derrida, Goffman, Peirce, Ricoeur, Varela, Thompson,

Watsuji and Watzlawick) and trace professionals (such as police officers or computer scientists) shed light on the background to this veritable odyssey. This didactic book presents a contemporary exploration of the fundamental nature of the trace via the new French paradigm of the Ichnos-Anthropos (Homme-trace) and its corollary, the corps-trace.

Break-Glass Helmut Petritsch 2014-09-19 Helmut Petritsch describes the first holistic approach to Break-Glass which covers the whole life-cycle: from access control modeling (pre-access), to logging the security-relevant system state during Break-Glass accesses (at-access), and the automated analysis of Break-Glass accesses (post-access). Break-Glass allows users to override security restrictions in exceptional situations. While several Break-Glass models specific to given access control models have already been discussed in research (e.g., extending RBAC with Break-Glass), the author introduces a generic Break-Glass model. The presented model is generic both in the sense that it allows to model existing Break-Glass approaches and that it is independent of the underlying access control model.

Reframing Donald Capps 1990-01-01 "I have read Professor Capp's Reframing with great interest. Since my colleagues and I have long thought of our concepts and practices as broad and general?as potentially applicable beyond our clinical sphere of psychotherapy?it is very satisfying to see this solid and skillful extension of our work into the very wide and important field of pastoral care."? John H. Weakland, Brief Therapy Center Mental Research Institute, Palo Alto, California

Munchausen's Pigtail Paul Watzlawick 1990-05-01 *Eric Ambler's Novels* Robert Lance Snyder 2020-01-15 Eric Ambler's first six novels released between 1936 and 1940 quickly established his reputation as a master craftsman of intrigue and espionage narratives. Far less often discussed are the twelve Cold War novels he published, after an eleven-year hiatus as a screenwriter, between 1951 and 1981. This study argues that his entire corpus manifests late modernism's impulse toward a broadly social, political, and cultural critique of the times. Ambler's fiction from the mid-1950s onward is also remarkable for its ludic turn as he assesses the self-deceptions of an increasingly bureaucratized and media-focused world blind to its own follies. In these later works can be seen elements of what has come to be known

as postmodernism, though in his commitment to chronicling the juggernaut of modernity he remains a uniquely independent witness of what is now being called the long twentieth century.

Partial Memories Ernst von Glasersfeld 2016-12-19

Autobiographical sketches by the philosopher and semiotician Ernst von Glasersfeld. The author writes:

"Memories are a personal affair. They are what comes to mind when you think back, not what might in fact have happened at that earlier time in your life. You can no longer be certain of what seemed important then, because you are now looking at the past with today's eyes. The Italian philosopher Giambattista Vico had that insight three hundred years ago: When we think of things that lie in the past, we see them in terms of the concepts we have now."

Diagenesis, I G.V. Chilingarian 1988-07-01 Diagenesis is a highly developed, interdisciplinary field of study. It is reciprocal in that it borrows from numerous scientific or technological specialities and then, in turn, repays them with useful results. Too often, however, the information gained and concepts developed remain unintegrated instead of being utilized quickly by several related earth-science fraternities. This volume, the first of a multi-volume work, attempts to bring together such information, thereby assisting the individual and the research group in keeping up with the data explosion. There is no end in sight to diagenetic research because of its wide practical and intellectual appeals. Consequently, periodic reviews, such as

presented in this volume, are greatly needed.

Interviews With Brief Therapy Experts Michael F. Hoyt 2013-05-13 This book is a compilation of twelve interviews with brief therapy experts and some of the field's most influential innovators (O'Hanlon, de Shazer, White, and Meichenbaum to name a few). The interviews, conducted to explore technical, theoretical, and ethical aspects of the theory and practice of brief therapy, offer the give-and-take spontaneity that can only be found in an interview style. The selection of the content is based on both the expertise of the interviewees as well as those issues of most concern to the field: managed care and economics, ethics, and being solution-focused.

Jesus Christ Superstition Robert M. Price 2019-09-04 Robert M. Price, a former Evangelical Christian, examines the confusing intersection of Christianity and superstition by asking questions. Is "practicing the presence of God" actually a variety of paranoia? Is having a "personal relationship with Jesus Christ" really akin to a child playing with an imaginary friend? At what point does a religious belief become an obsessive neurosis? Price finds that the source of superstition in Christianity is the objectification of the transcendent. As a result, he argues, many of the most destructive superstitions within Christianity are inessential accretions to the faith, interfering with life-transforming piety to the glad benefit of many of Christianity's adherents. Christians who believe that an unexamined faith is not worth having will profit from struggling with *Jesus Christ Superstition*.
