The importance of teaching

Great Britain: Department for Education 2010-11-24
England's school system performs below its potential and can improve significantly. This white paper outlines action designed to: tackle the

weaknesses in the system; strengthen the status of teachers and teaching; reinforce the standards set by the curriculum and qualifications; give schools back the freedom to determine their own development; make schools more accountable to parents, and help them to learn more quickly and systematically from good practice elsewhere; narrow the gap in attainment between rich and poor. The quality of teachers and teaching is the most important factor in

determining how well children do. The Government will continue to raise the quality of new entrants to the profession, reform initial teacher training, develop a network of "teaching schools" to lead training and development, and reduce the bureaucratic burden on schools. Teachers will be given more powers to control bad behaviour. The National Curriculum will be reviewed, specifying a tighter model of knowledge of core subjects so that the Curriculum becomes a benchmark against which school can be judged. Schools will be given more freedom and autonomy, the Academies programme extended and parents will be able to set up "Free Schools" to meet parent demand. Accountability for pupil performance is critical, and much more information will be available to aid understanding of a school's performance. School improvement will be the responsibility of schools, not central government. Funding of schools needs to be fairer and more transparent, and there

will be a Pupil Premium to target resources on the most deprived pupils.

The English Baccalaureate
Great Britain: Parliament:
House of Commons: Education
Committee 2011-07-28 This
report suggests that any new
performance or curriculum
measures affecting schools

should only be implemented after proper consultation with key stakeholders and the wider public - something which didn't happen with the English Baccalaureate (EBac). The Committee says that the Government should also have waited until after the conclusion of the National Curriculum Review before introducing the EBac. They want the Government to deliver on its promise in the White Paper - The Importance of Teaching - to use performance tables to put greater emphasis on the progress of every child. The report notes that "certain academic subjects studied at A-level are more valued by Russell Group universities than others", but argues that a "focus on a fairly narrow range of subjects, demanding considerable curriculum time, is likely to have negative consequences on the uptake of other subjects." The Committee does not make recommendations on which subjects should or should not be included but rather encourages the Government to

reconsider the EBac's composition when the National Curriculum Review is concluded. The Government should confirm how it will monitor the attainment of children on free school meals in the EBac. The report also calls for further international evidence to inform debate on the merits of the EBac: evidence the inquiry received did not suggest a link, in other countries, between the prescribed study of certain academic subjects and improved attainment and prospects for poorer students. Elsewhere, the report argues that the current arrangements for certification of the EBac should be shelved, as should calls for a Technical Baccalaureate to sit alongside the existing award.

Advanced Problems in Mathematics Stephen Siklos
 2020-10-09 This new and expanded edition is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. *Advanced Problems in Mathematics* bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a
