*Bob and Tom Get a Dog* Cecilia Minden 2021 "Siblings Bob and Tom get a dog with spots. This A-level story uses decodable text to raise confidence in early readers. The book uses a combination of sight words and short-vowel words in repetition to build recognition. Original illustrations help guide readers through the text."--

*Automatic Text Simplification* Horacio Saggion 2017-04-25 Thanks to the availability of texts on the Web in recent years, increased knowledge and information have been made available to broader audiences. However, the way in which a text is written—its vocabulary, its syntax—can be difficult to read and understand for many people, especially those with poor literacy, cognitive or linguistic impairment, or those with limited knowledge of the language of the text. Texts containing uncommon words or long and complicated sentences can be difficult to read and understand by people as well as difficult to analyze by machines. Automatic text simplification is the process of transforming a text into another text which, ideally conveying the same message, will be easier to read and understand by a broader audience. The process usually

involves the replacement of difficult or unknown phrases with simpler equivalents and the transformation of long and syntactically complex sentences into shorter and less complex ones. Automatic text simplification, a research topic which started 20 years ago, now has taken on a central role in natural language processing research not only because of the interesting challenges it possesses but also because of its social implications. This book presents past and current research in text simplification, exploring key issues including automatic readability assessment, lexical simplification, and syntactic simplification. It also provides a detailed account of machine learning techniques currently used in simplification, describes full systems designed for specific languages and target audiences, and offers available resources for research and development together with text simplification evaluation techniques.

Codes and Ciphers - A History Of Cryptography Alexander D'Agapeyeff  
2016-08-26 This vintage book contains

Alexander D'Agapeyeff's famous 1939 work, Codes and Ciphers - A History of Cryptography. Cryptography is the employment of codes and ciphers to protect secrets, and it has a long and interesting history. This fantastic volume offers a detailed history of cryptography from ancient times to modernity, written by the Russian-born English cryptographer, Alexander D'Agapeyeff. Contents include: The beginnings of Cryptography, From the Middle Ages Onwards, Signals, Signs, and Secret Languages, Commercial Codes, Military Codes and Ciphers, Types of Codes and Ciphers, Methods of Deciphering, etcetera. Many antiquarian texts such as this, especially those dating back to the 1900s and before, are increasingly hard to come by and expensive, and it is with this in mind that we are republishing this book now in an affordable, modern, high quality edition. It comes complete with a specially commissioned new biography of the author.

**Guidelines on Cell Phone Forensics** U. S. Department U.S. Department of Commerce 2014-01-21 Mobile phone forensics is the science of recovering digital evidence from a mobile phone under forensically sound conditions using accepted methods. Mobile phones, especially those with advanced capabilities, are a relatively recent phenomenon, not usually covered in classical computer forensics. This guide attempts to bridge that gap by providing an in-depth look into mobile phones and explaining the technologies involved and their relationship to forensic procedures. It covers phones with features beyond simple voice communication and text messaging and their technical and operating characteristics. This guide also discusses procedures for the preservation, acquisition,

examination, analysis, and reporting of digital information present on cell phones, as well as available forensic software tools that support those activities.

**Large-Scale C++ Volume I** John Lakos 2019-12-02 Writing reliable and maintainable C++ software is hard. Designing such software at scale adds a new set of challenges. Creating large-scale systems requires a practical understanding of logical design – beyond the theoretical concepts addressed in most popular texts. To be successful on an enterprise scale, developers must also address physical design, a dimension of software engineering that may be unfamiliar even to expert developers. Drawing on over 30 years of hands-on experience building massive, mission-critical enterprise systems, John Lakos shows how to create and grow Software Capital. This groundbreaking volume lays the foundation for projects of all sizes and demonstrates the processes,

methods, techniques, and tools needed for successful real-world, large-scale development. Up to date and with a solid engineering focus, **Large-Scale C++, Volume I: Process and Architecture**, demonstrates fundamental design concepts with concrete examples. Professional developers of all experience levels will gain insights that transform their approach to design and development by understanding how to Raise productivity by leveraging differences between infrastructure and application development Achieve exponential productivity gains through feedback and hierarchical reuse Embrace the component's role as the fundamental unit of both logical and physical design Analyze how fundamental properties of compiling and linking affect component design Discover effective partitioning of logical content in appropriately sized physical aggregates Internalize the important differences among sufficient, complete, minimal, and primitive software Deliver solutions that simultaneously optimize encapsulation, stability, and performance Exploit the nine established levelization techniques to avoid cyclic physical dependencies Use lateral designs judiciously to avoid the "heaviness" of conventional layered architectures Employ appropriate architectural insulation techniques for eliminating compile-time coupling Master the multidimensional process of designing large systems using component-based methods This is the first of John Lakos's three authoritative volumes on developing large-scale systems using C++. This book, written for fellow software practitioners, uses familiar C++ constructs to solve real-world problems while identifying (and motivating) modern C++ alternatives. Together with the forthcoming **Volume II: Design and**

Implementation and Volume III: Verification and Testing, Large-Scale C++ offers comprehensive guidance for all aspects of large-scale C++ software development. If you are an architect or project leader, this book will empower you to solve critically important problems right now – and serve as your go-to reference for years to come. Register your book for convenient access to downloads, updates, and/or corrections as they become available. See inside book for details.

**Snookered** Ishy Din 2014-12-30 Snookered probes into the lives of young Muslim men and their fragile masculinity, burdened by cultural expectations yet charged with personal dreams. In a volatile political climate, Ishy Din opens a timely window into a strand of British Muslim life that often remains unseen. The plot follows four friends who, every year, meet on the anniversary of their mate's death for a game of pool and a few drinks. As they excavate the past and measure their own lives, secrets are revealed and allegiances shift as quickly as the drinks are downed. Can they put to rest their guilt over the untimely death of their friend? And will their friendship survive the final betrayal? One of the very few plays written both by and about British

Muslims, *Snookered* explores their camaraderie, life decisions, and their self identity within their close-knit Muslim community of extended families and network of friends. The sharp, pace-filled dialogue captures the Punjabi-English urban patois that is currently developing in northern towns but is rarely seen onstage. The result is that the characters are both alive and relevant, and moments of sharp wit collide with emotionally searing exchanges. Developed by the theatre company Tamasha, whose manifesto is to explore British Asian perspectives and identities, *Snookered* is unafraid to feature difficult and significant themes such as religion, drug addiction, misogyny, poverty and racism. Against this backdrop, *Snookered* is first and foremost a psychologically detailed but razor-sharp depiction of young men finding their paths in life, whilst navigating what it means to be young, British and Muslim.

**A Burning** Megha Majumdar 2021-01-21 'Immaculately constructed, acidly observed and gripping from start to finish, A Burning is a brilliant

debut.' The Guardian 'A big hit in America last year, this buzzy debut about the impact of a terrorist attack in a Kolkata slum on three connected characters is full of hot-button global topics, including violent nationalism' Metro 'Powerful. [...] Majumdar's page-turning thriller seeks to open our eyes to the role of persecution in populist politics' – Mail on Sunday 'An evocative insight into class, corruption, injustice and power dynamics, this poignant tale makes for memorable reading' Cosmopolitan 'Majumdar conjures up three notably effervescent, intense voices'? Daily Telegraph 'A brilliant character study about politics and power, this assured debut moves at a thriller's pace but with a meticulous eye for detail.' Nikesh Shukla 'A Burning is a political thriller so charged and tense, it will keep you reading after lights out.' Red Magazine A girl walks through the slums of Kolkata holding an armful of books. She returns home smelling of smoke, and checks her most prized possession: a brand-new smartphone, purchased in instalments. On Facebook, there is only one conversation. #KolabaganTrainAttack On the small, glowing screen, she types a dangerous thing... 'If the police didn't help ordinary people like you and me, if the police watched them die, doesn't that mean that the government is also a terrorist?' Set in contemporary India, A Burning is the story of three unforgettable characters, all dreaming of a better future, whose lives are changed for ever when they become caught up in the devastating aftermath of a terrorist attack. Jivan – a poor, young, Muslim girl, who dreams of going to college – faces a possible death sentence after being accused of collaborating with the terrorists. Lovely – an exuberant hijra who longs to be a Bollywood

star – holds the alibi that can set Jivan free, but telling the truth will cost her everything she holds dear. PT Sir – an opportunistic gym teacher who once taught Jivan – becomes involved with Hindu nationalist politics and his own ascent is soon inextricably linked to Jivan's fall. Taut, propulsive and electrifying, from its opening lines to its astonishing finale, *A Burning* confronts issues of class, fate, prejudice and corruption with a Dickensian sense of injustice, and asks us to consider what it means to nurture big ambitions in a country hurtling towards political extremism. *A Burning* is a novel for our times and for all time.

Manual of Ornithology Noble S. Proctor 1993-01-01 "Here is a volume that has no parallel. . . . A good reference book for those interested in the details of avian anatomy."-- Science Books & Films "A gold mine of facts. . . . Every library and biology department, as well as every birder, should have a copy close at hand."--Roger Tory Peterson, from the foreword One of the most heavily illustrated ornithology references ever written, *Manual of Ornithology* is a visual guide to the structure and anatomy of birds--a basic tool for investigation for anyone curious about the fascinating world of birds. A concise atlas of anatomy, it contains more than 200 specially prepared accurate and clear drawings that include material never illustrated before. The text is as

informative as the drawings; written at a level appropriate to undergraduate students and to bird lovers in general, it discusses why birds look and act the way they do. Designed to supplement a basic ornithology textbook, the Manual of Ornithology covers systematics and evolution, topography, feathers and flight, the skeleton and musculature, and the digestive, circulatory, respiratory, excretory, reproductive, sensory, and nervous systems of birds, as well as field techniques for watching and studying birds. Each chapter concludes with a list of key references for the topic covered, with a comprehensive bibliography at the end of the volume.

*Silence within and beyond Pedagogical Settings* Eva Alerby 2020-09-15 This book explores the significance of silence within and beyond pedagogical contexts. Silence is a complex and multidimensional phenomenon for everyday life: since schools mirror society, it is also significant in education. While silence can be experienced in a multitude of different ways, the author reflects on whether silence itself can bear a message: is there an aspect of dialogue in silence, or is it a language all of its own? This book examines a variety of silences essential for education, examining such topics as silence and aspects of power, silent students, and the relationship between listening and silence. Drawing on a range of empirical data, the author elucidates the significance of silence in pedagogical contexts.

Bright Boulevards, Bold Dreams Donald Bogle 2009-02-19 In *Bright Boulevards, Bold Dreams*, Donald Bogle tells—for the first time—the story of a place both mythic and real: Black Hollywood. Spanning sixty years, this deliciously entertaining history uncovers the audacious manner in

which many blacks made a place for themselves in an industry that originally had no place for them. Through interviews and the personal recollections of Hollywood luminaries, Bogle pieces together a remarkable history that remains largely obscure to this day. We discover that Black Hollywood was a place distinct from the studio-system-dominated Tinseltown—a world unto itself, with unique rules and social hierarchy. It had its own talent scouts and media, its own watering holes, elegant hotels, and fashionable nightspots, and of course its own glamorous and brilliant personalities. Along with famous actors including Bill “Bojangles” Robinson, Hattie McDaniel (whose home was among Hollywood’s most exquisite), and, later, the stunningly beautiful Lena Horne and the fabulously gifted Sammy Davis, Jr., we meet the likes of heartthrob James Edwards, whose promising career was derailed by whispers of an affair with Lana Turner, and the mysterious Madame Sul-Te-Wan, who shared a close lifelong friendship with pioneering director D. W. Griffith. But Bogle also looks at other members of the black community—from the white stars’ black servants, who had their own money and prestige, to gossip columnists, hairstylists, and architects—and at the world that grew up around them along Central Avenue, the Harlem of the West. In the tradition of Hortense Powdermaker’s classic *Hollywood: The Dream Factory* and Neal Gabler’s *An Empire of Their Own*, in *Bright Boulevards, Bold Dreams*, Donald Bogle re-creates a vanished world that left an indelible mark on Hollywood—and on all of America.

**Griffith Review 61** Julianne Schultz 2018-07-30 Prime Minister Malcolm Turnbull celebrates Australia as 'the most successful multicultural nation in the world'. This is a grand claim and important to a sense of identity and belonging, but at times it seems that multiculturalism is more an article of faith than a work in progress. What it really means in the twenty-first century is the focus of *Griffith Review 61: Who We Are*, which will examine both the opportunities offered and the complexities involved. The nation's population has virtually doubled since 1975, and in recent years the rules around migration have been altered significantly. Those who have chosen to make their home here in the past have changed Australia, and waves of new arrivals continue to transform

the country. Yet the apparent certainties of Australia as a permanent settler society are giving way to the precarious churn of temporary migration. This edition will give voice to this changing reality, explore the big issues of belonging, citizenship and participation, and tease out how contemporary Australia might evolve. This is a rich field, replete with policy questions and personal narratives. It is a success story, but the full picture is complex, and past achievements no guarantee of future results. The nation's boundaries are imaginary as much as physical, and constantly contested by an unsettled history and a shifting present. Renewed assertions of national identity run parallel to the increasing globalisation of opportunity and threat, as if the more fluid the world becomes, the greater the urge to hold onto something fixed and stable. Yet do we really know who 'we' are? Where does Australia begin and end? Who can claim to belong and who can be legitimately excluded? Julianne Schultz AM FAHA is the founding editor of *Griffith Review*, the award-winning literary and public affairs quarterly journal. Peter Mares is contributing editor with the online magazine *Inside Story* and senior moderator with *The Cranlana Programme*. Peter was a broadcaster with the ABC for twenty-five years, and is the author of two books – the award-winning *Borderline: Australia's Response to Refugees and Asylum Seekers in the Wake of the Tampa* and *Not Quite Australian: How Temporary Migration Is Changing the Nation*. 'An eclectic, thought-provoking and uniformly well-written collection.' Australian 'This is commentary of a high order. The prose is unfailingly polished; the knowledge and expertise of writers impressive.' Sydney

Morning Herald 'For intelligent, well-written quarterly commentary...Griffith Review remains the gold standard.' Honest History

**Advanced Engineering Mathematics** H. C. Taneja 2010-10-07 The text has been divided in two volumes: Volume I (Ch. 1-13) & Volume II (Ch. 14-22). In addition to the review material and some basic topics as discussed in the opening chapter, the main text in Volume I covers topics on infinite series, differential and integral calculus, matrices, vector calculus, ordinary differential equations, special functions and Laplace transforms. Volume II covers topics on complex analysis, Fourier analysis, partial differential equations and statistics. The present book has numerous distinguishing features over the already existing books on the same topic. The chapters have been planned to create interest among the readers to study and apply the mathematical tools. The subject has been presented in a very lucid and precise manner with a wide variety of examples and exercises, which would eventually help the reader for hassle free study.

5G Mobile Communications Saad Asif  
2018-07-20 This book will help readers comprehend technical and policy elements of telecommunication particularly in the context of 5G. It first presents an overview of the current research and standardization practices and lays down the global frequency spectrum allocation process. It further lists solutions to accommodate 5G spectrum requirements. The readers will find a considerable amount of information on 4G (LTE-Advanced), LTE-Advance Pro, 5G NR (New Radio); transport network technologies, 5G NGC (Next Generation Core), OSS (Operations Support Systems), network deployment and end-to-end 5G network architecture. Some details on multiple network elements (end products) such as 5G base station/small cells and the role of semiconductors in telecommunication are also provided. Keeping trends in mind, service delivery mechanisms along with state-of-the-art services

such as MFS (mobile financial services), mHealth (mobile health) and IoT (Internet-of-Things) are covered at length. At the end, telecom sector's burning challenges and best practices are explained which may be looked into for today's and tomorrow's networks. The book concludes with certain high level suggestions for the growth of telecommunication, particularly on the importance of basic research, departure from ten-year evolution cycle and having a 20–30 year plan. Explains the conceivable six phases of mobile telecommunication's

ecosystem that includes R&D, standardization, product/network/device & application development, and burning challenges and best practices Provides an overview of research and standardization on 5G Discusses solutions to address 5G spectrum requirements while describing the global frequency spectrum allocation process Presents various case studies and policies Provides details on multiple network elements and the role of semiconductors in telecommunication Presents service delivery mechanisms with special focus on IoT
