Ionic Liquids in the Biorefinery Concept Rafal Bogel-Lukasik

Green Industrial Applications of Ionic Liquids Robin D. Rogers 2012-12-06

This book contains the lecture notes for the NATO Advanced Research Workshop on the Green Industrial Applications of Ionic Liquids held April 12th-16, 2000 in Heraklion, Crete, Greece. This was the first international meeting devoted to research in the area of ionic liquids (salts with melting points below 100 °C), and was intended to explore the promise of ionic liquids as well as to set a research agenda for the field. It was the first international meeting dedicated to the study and application of ionic liquids as solvents, and forty-one scientists and engineers from academia, industry, and government research laboratories (as well as six industry observers and four student assistants) met to discuss the current and future status of the application of ionic liquids to new green industrial technologies. It was immediately clear that the number of organic chemists and engineers working in the field needed to be increased. It was also clear that the declining interest in high temperature molten salts and subsequent increase in low melting ionic liquid solvents had not yet taken hold in Eastern Europe. Participants from NATO Partner Countries contributed significant expertise in high temperature molten salts and were able to take back a new awareness and interest in ionic liquid solvents.

Ben Horowitz analyzes the problems that confront leaders every day, sharing the insights he's gained developing, managing, selling, buying, investing in, and supervising technology companies. A lifelong rap fanatic, he amplifies business lessons with lyrics from his favorite songs, telling it straight about everything from firing friends to poaching competitors, cultivating and sustaining a CEO mentality to knowing the right time to cash in. Filled with his trademark humor and straight talk, *The Hard Thing About Hard Things* is invaluable for veteran entrepreneurs as well as those aspiring to their own new ventures, drawing from Horowitz's personal and often humbling experiences.

Defending Beef Nicolette Hahn Niman 2014 For decades it has been nearly universal dogma among environmentalists that livestock--goats, sheep, and others, but especially cattle--are Public Enemy Number One. They erode soils, pollute air and water, damage riparian areas, and decimate wildlife populations. The UN's Food and Agriculture Organization bolstered the credibility of this notion with its 2007 report that declared livestock to be the

single largest contributor to human-generated climate-change emissions. But is the matter really so clear cut? Hardly. In her new book, *Defending Beef*, environmental lawyer turned rancher Nicolette Hahn Niman argues that cattle are not inherently bad for the Earth. The impact of grazing can be either negative or positive, depending on how livestock are managed. In fact, with proper oversight livestock can actually play an essential role in maintaining grassland ecosystems by performing the same functions as the natural herbivores that once roamed and grazed there. She shows how dispersed, grass-based, smaller-scale farms can and should become the basis for American food production. And while no single book could definitively answer the thorny question of how to feed the Earth's growing population, *Defending Beef* makes the case that, whatever the world's future food system looks like, livestock can and must be part of the solution.

Intergenerational Trauma and Healing Melissa Leal 2021-03-11 This Special Issue of *Genealogy* explores the topic of "Intergenerational Trauma and Healing". Authors examine the ways in which traumas (individual or group, and affecting humans and non-humans) that occurred in past generations reverberate into the present and how individuals, communities, and nations respond to and address those traumas. Authors also explore contemporary

traumas, how they reflect ancestral traumas, and how they are being addressed through drawing on both contemporary and ancestral healing approaches. The articles define trauma broadly, including removal from homelands, ecocide, genocide, sexual or gendered violence, institutionalized and direct racism, incarceration, and exploitation, and across a wide range of spatial (home to nation) and temporal (intergenerational/ancestral and contemporary) scales. Articles also approach healing in an expansive mode, including specific individual healing practices, community-based initiatives, class-action lawsuits, group-wide reparations, health interventions, cultural approaches, and transformative legal or policy decisions. Contributing scholars for this issue are from across disciplines (including ethnic studies, genetics, political science, law, environmental policy, public health, humanities, etc.). They consider trauma and its ramifications alongside diverse mechanisms of healing and/or rearticulating self, community, and nation.

Solvent Effects in Chemistry Erwin Buncl 2015-08-03 This book introduces the concepts, theory and experimental knowledge concerning solvent effects on the rate and equilibrium of chemical reactions of all kinds. It begins with basic thermodynamics and kinetics, building on this foundation to demonstrate how a more detailed understanding of these effects may be used to aid in determination of reaction mechanisms, and to aid in planning syntheses. Consideration is given to theoretical calculations (quantum chemistry, molecular dynamics, etc.), to statistical methods (chemometrics), and to modern day concerns such as "green" chemistry, where utilization and disposal of chemical waste or by-products in an environmentally safe way is as important as achieving the desired end products by all chemists nowadays. The treatment progresses from elementary to advanced material in straightforward fashion. The more advanced topics are not developed in an overly rigorous way so that upper-level undergraduates, graduates, and newcomers to the field can grasp the concepts easily.
