Large-Eddy Simulation for Acoustics Claus Wagner 2007-01-15 Noise pollution around airports, trains, and industries increasingly attracts environmental concern and regulation. Designers and researchers have intensified the use of large-eddy simulation (LES) for noise reduced industrial design and acoustical research. This 2007 book, written by 30 experts, presents the theoretical background of acoustics and of LES, followed by details about numerical methods, e.g. discretization schemes, boundary conditions, coupling aspects. Industrially relevant, hybrid RANS/LES techniques for acoustic source predictions are presented in detail. Many applications are featured ranging from simple geometries for mixing layers and jet flows to complex wing and car geometries. Selected applications include scientific investigations at industrial and university research institutions.

The Structures and Reactions of the Aromatic Compounds G. M. Badger 2011-07-21 This 1954 book was the first to be devoted to the fundamental properties of the aromatic compounds as a whole. It describes the experimental and theoretical attempts to explain their structure and discusses their characteristic properties and the mechanism of their reactions. Heterocyclic compounds are included in Dr Badger's survey. Aromatic compounds are characterised by their cyclic molecular structure, their high degree of unsaturation and their stability. Coal tar is the chief source of aromatic compounds, but they are also made from crude oil and can be produced synthetically. Nearly all dyestuffs are 'aromatic', as are most of the common drugs and explosives. The book addressed itself primarily to graduates and final-year undergraduates. It was also of interest to research chemists in the dyestuffs, pharmaceutical and explosives industries. As some complex aromatic compounds produce cancer on the skin of laboratory animals, cancer research workers will also have found it relevant.

CAPS LOCK: How Capitalism Took Hold of Graphic Design, and How to Escape from It Ruben Pater 2021-09-21 Capitalism could not exist without the coins, banknotes, documents, information graphics, interfaces, branding, and advertisements made by graphic designers. Even anti-consumerist strategies such as social design and speculative design are appropriated to serve economic growth. It seems design is locked in a cycle of exploitation and extraction, furthering inequality and environmental collapse. CAPS LOCK uses clear language and visual examples to show how graphic design and capitalism are inextricably linked. The book features designed objects and also examines how the study, work, and professional practice of designers support the market economy. Six radical design cooperatives are featured that resist capitalist thinking in their own way, hoping to inspire a more socially aware graphic design.

Banded Vegetation Patterning in Arid and Semiarid Environments David J. Tongway 2012-12-06 Aerial photography has revealed the striking, widespread phenomenon of repeating patterns of vegetation in more arid areas of the world. Two interdependent phases, bands of dense and sparse vegetation, alternate in the landscape. This volume synthesizes half a century's accumulated knowledge of both theoretical and applied landscape function from a variety of these regions. It covers structure, dynamics, and methods of study, as well as disturbances to these landscapes and relevant management issues. Various chapters discuss the role of modeling in answering questions about the origins and complex processes of banded landscapes.
